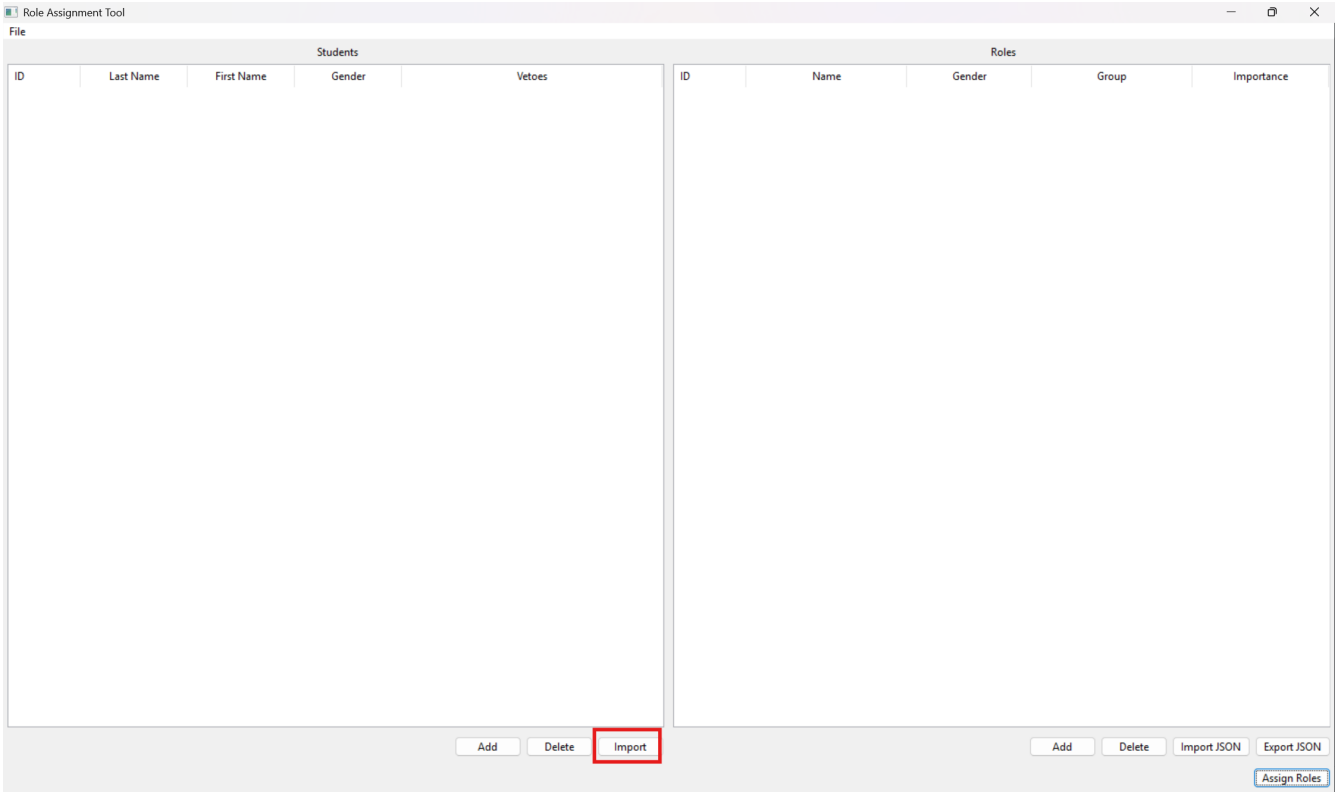
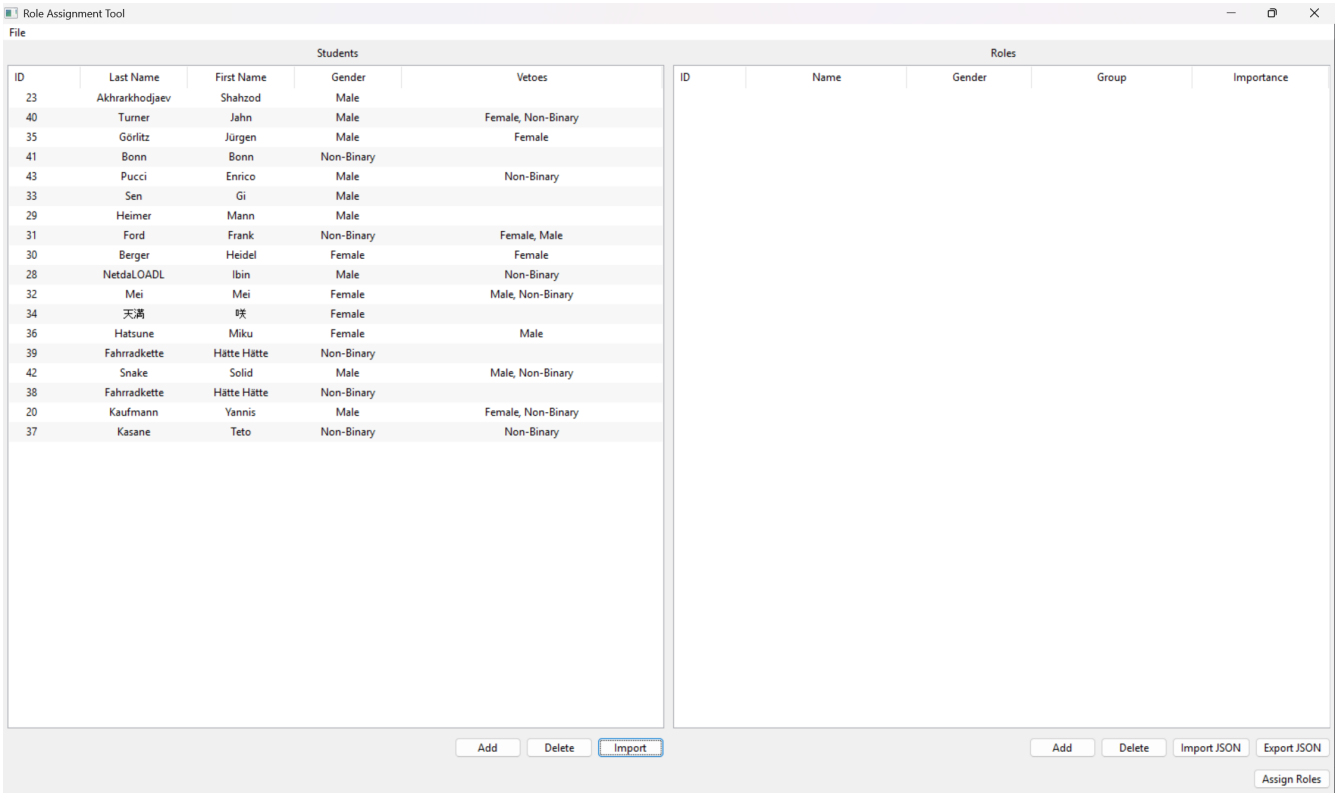
Getting Started

- Click the "Import" button below the student editor panel on the left side of the application.



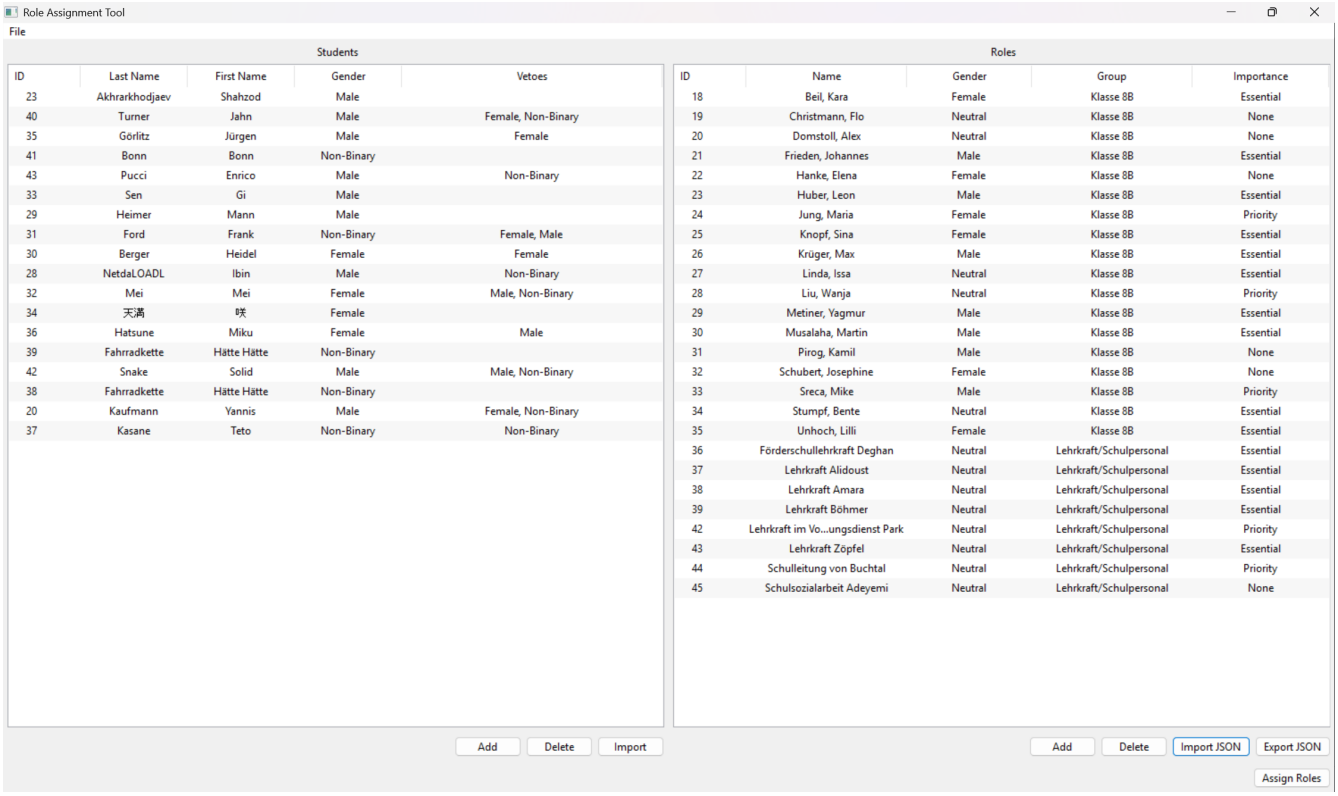
- Select the file exported from LimeSurvey.
- The list of students should then appear in the panel.



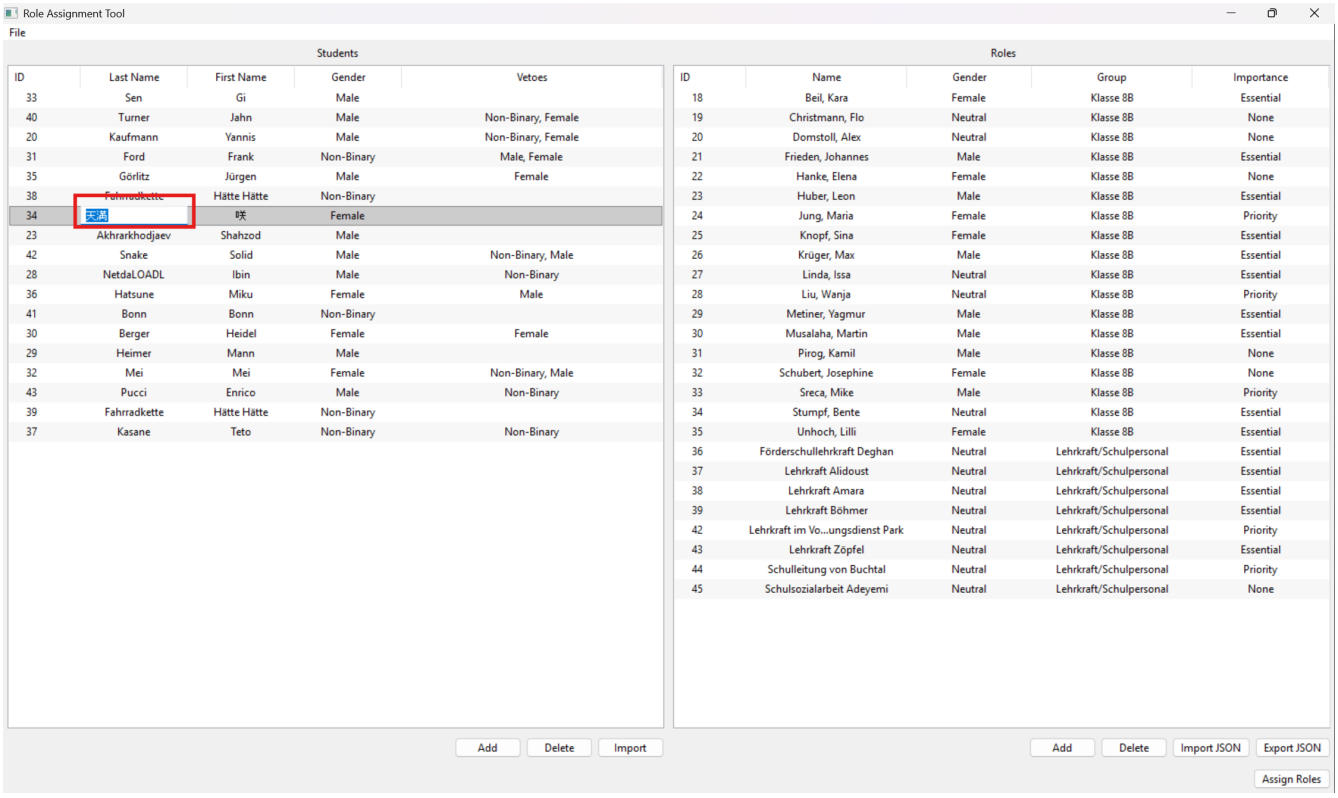
- Select a role file.

CAUTION	Only select one of the provided role files! These can be found in the "roles" folder.

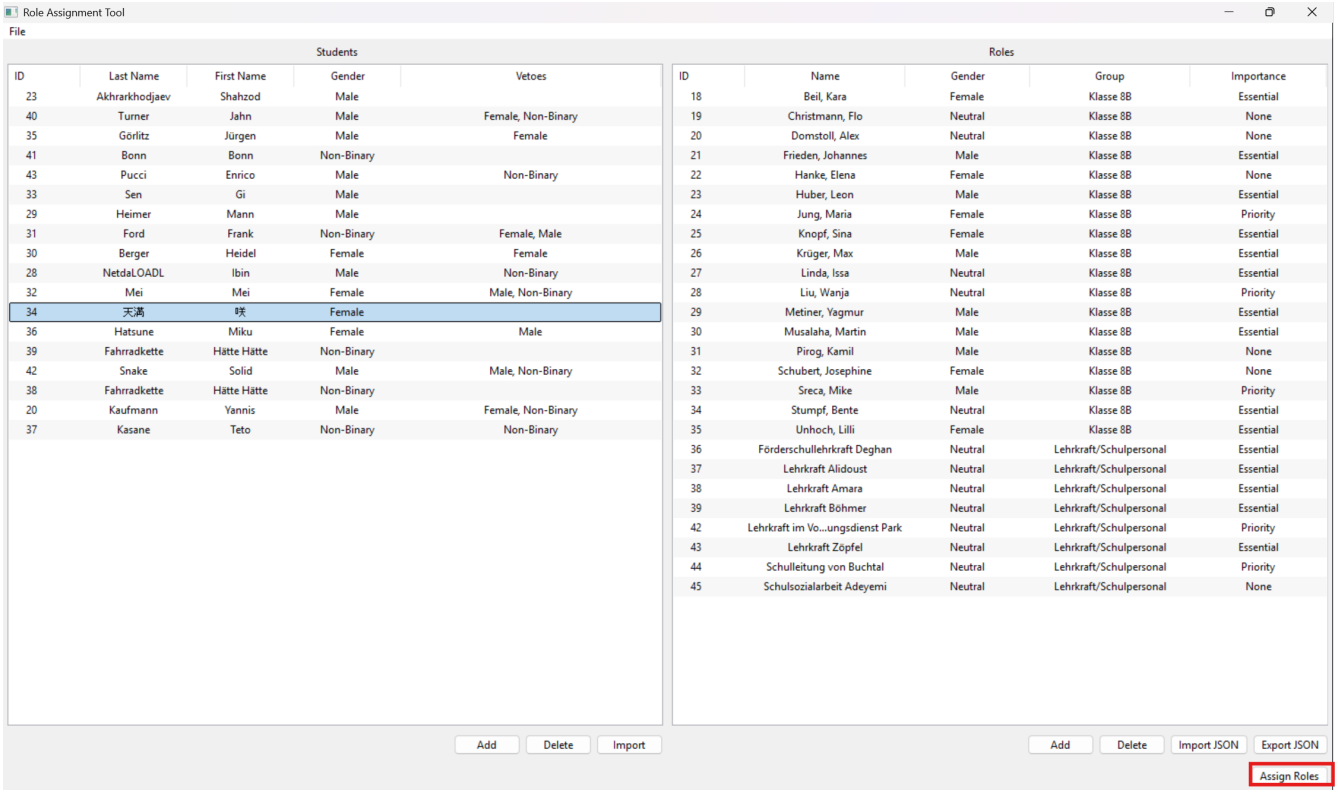
- The available roles should then be visible in the panel.



- In both the student and role editor panels, edits can easily be made by clicking on the fields.



- When the input data as shown in the role and student editor panels looks right, click the "Assign Roles" button.



- The assignment process is computationally intensive and might take up to a minute.
- After the assignment is done calculating, the result will be presented in a separate window. In the case of an error, an error will be displayed instead.
